Re: Source Area Soil Sampling
Former Sheller-Globe Facility
3200 Main Street, Keokuk, Iowa

Dear Mr. Williams:

On behalf of United Technologies Corporation (UTC) and Metzeler Automotive Profile Systems Iowa, Inc. (Metzeler), we are providing written notice of our intent to begin the source area soil sampling at the former Sheller-Globe Facility in Keokuk, Iowa on April 17, 2002. This notice is being provided in advance of receipt of any written comments from EPA on the work plan for the soil sampling. We have scheduled the sampling event based on your verbal approval to proceed on April 3, 2002. Per your verbal comment regarding field screening, both the saturated and unsaturated portions of the soil core down to termination depth of the borings will be screened.

Please contact Mr. Rick Meyer at UTC if you have any questions or comments. He can be reached at (860) 728-7586.

Very truly yours,

Klaas J. Doeden
Project Hydrogeologist
